Tutorial – OAuth

Q1.

Create a Twitter account.
Follow a couple of people.

Q2.

Next go to the Twitter developers page to register an application
(https://dev.twitter.com/)
Create an application.
See your Consumer Key and Consumer Secret.

Q3.

Create a Java Project and add the following jars to the build path

- commons-codec-1.3.jar
- signpost-core-1.2.jar

Create the class TwitterClient . Change the" Consumer Key" and "Consumer Secret"
to the correct values.

Q4.

Run TwitterClient.

- When the client runs it asks for out of band authentication in order to obtain
  an access token for your (anyone's) Twitter resources.
- You will need to login in to twitter and allow access to the client (application).
- You get a PIN code and enter it in to the client.
- This allows the client to access your resources.
